LAGS Demographics: Communities and Localities

The information presented in this paper was compiled during 1980 and 1981
for use in the LAGS handbook, especially chapters 2, 3, and 5, by the editors
and editorial assistants.   Though much of the data preserved here also appears
in the handbook, the user of the LAGS materials may find these tabular and
alphabetical arrangements valuable as references both in the interpretation
of handbook generalizations and in further analysis of the Basic Materials them-
selves.

The presentation here consists of three parts.   First, population figures
for each county in the LAGS territory, according to the United States Bureau of
the Census, are given for the years 1790, 1820, 1850, 1880, 1910, 1930, 1950,
and 1970.   This information appears in the handbook for the counties and parishes
in which LAGS interviews were conducted, arranged according to the 16 sectors of
the LAGS territory.   Here, all counties in the territory are included, regardless
of whether an interview was done there, and the arrangement is state-by-state
rather than sector-by-sector, to aid those users of the materials whose interest
may be the demographics of an entire state rather than a portion of it.   Within
each sector, the grid system is maintained, so that the population figures will
be more easily related to other LAGS materials.

Second, population figures for the localities (cities, towns, villages, and
smaller units) in the LAGS territory appear for the same decades, if available.
Census records are here supplemented by figures from atlases, gazetteers, and other
reference works.   In some instances, particularly with the smaller places, the
figure given is an estimate rather than an exact count.   The arrangement of the
localities is also state-by-state, and by LAGS sector and grid unit within the

state. Places missing from this list are those for which no population figures could be found; these localities are nevertheless included in the third section based on probable population.

Finally, all communities (counties and parishes) and localities in which LAGS interviews took place are listed here, divided according to the classification described in Chapter 2 of the handbook. Thus, the communities appear in six lists, alphabetically by state, according to the percentage of urban population; the localities are similarly grouped according to the population range, with six basic divisions and several subdivisions of the last group. This classification is further described below.

Although this paper and the applications of its data are a cooperative venture, involving all members of the LAGS editorial staff, the basic compilation of the data was done by editorial assistants E. Bassett, N. Pederson, and D. Sutton. They recorded the figures from the census records and other reference sources and double-checked all information whenever possible. The division of the communities and localities into types was made by G. Bailey and L. Pederson for the analysis included in Chapter 2; their totals were verified by E. Bassett, S. Leas, and N. Pederson. Most of the following tables were typed by N. Pederson and S. Leas after all other work was complete.

PART I: COMMUNITIES

        Population figures for the eight states in the LAGS territory appear in

the following tables. The states are arranges alphabetically: Alabama, Arkansas,

Florida, Georgia, Louisiana, Mississippi, Tennessee, and Texas. Within each

state, the communities (counties or parishes) are ordered according to the LAGS

grid system. Thus, the counties in East Tennessee precede those in Middle and

West Tennessee, beginning with grid unit A (Johnson and Carter counties). The

name of each county appears in the left-hand column, with the grid unit and county

number listed immediately below. Following are the total population for the

county in the years 1790, 1820, 1850, 1880, 1910, 1930, 1950, and 1970, the same

years given in Chapter 5 of the LAGS handbook. Beneath the total populations for

each decade, the black population appears in parentheses.

        In the original plan for the LAGS project, East Georgia was not to be in-

cluded because those communities were part of the Linguistic Atlas of the Middle

and South Atlantic States project. However, through A Dialect Survey of Rural

Georgia and other student interviews, LAGS acquired a large number of field

records from this territory. Their grid units were distinguished from those

of the other part of the territory by the addition of the # symbol. When the

LAGS area was later expanded to include all of Georgia, these units were re-

tained, numbered separately from the rest of the territory (O# 001 through

AK# 064). Rather than keeping them distinct from the rest of the state, LAGS

listings, including the Table of Informants (Part II of the Basic Materials),

include each # grid unit following the regular unit designated by the same let-

ler: e.g., Unit Q is followed by Unit Q#; Unit AC, by Unit AC#, and so forth,

through AK#. The numbering in Georgia is therefore not consecutive, but is

periodically interrupted by these additional communities.

PART II: LOCALITIES

The localities of the LAGS territory, including cities, towns, villages, and even smaller populated places, are listed in the following tables when population figures were found for them. Because many of the places designated by the informants as their birthplaces or localities of residence are quite small or no longer extant, the listing is incomplete. The information below is thus restricted to figures readily available from standard references.

Localities are arranged first in order by state: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Tennessee, and Texas, and then, like the communities, by grid unit across the LAGS area. Within each grid unit, they are then ordered according to the Table of Informants. Consequently, the first grid unit in East Tennessee is composed of Neva, Laurel Bloomery, and Shady Valley from Johnson County, and Shell Creek and Carter from Carter County. Very little population information was found regarding these small villages; on the other hand, for large cities such as Knoxville and Chattanooga, the data can be extended back to the nineteenth century. Available figures are given for these decades: 1820, 1850, 1880, 1910, 1930, 1950, and 1970. For many of the smaller places, only the more recent figures are included. The black population, if known, is listed in parentheses below the total population, as with the communities. The arrangement of the # units, described in the introduction to Part I, is maintained here also.

PART III

COMMUNITY AND LOCALITY TYPES

The LAGS communities are classified here and in Chapter 2 of the handbook according to their industrial and urban development. There are six categories, designated by Roman numerals, and identified by the name of a representative Alabama community:

I. Jefferson type communities, like Jefferson County, are industrialized and more than two thirds urban in population. They are characterized by a variety of industry and commerce, most serving as cultural and economic focal areas. The LAGS sample includes 61 of these.

II. Lauderdale type communities are industrialized and have more than one third but less than two thirds urban population. Their primary economic resources are industry and commerce, but commercial agriculture is often also important. There are 59 of this type.

III. Tallapoosa type communities, although industrialized, have urban populations of less than one third. Despite their industrial base, they often have significantly more agriculture than the communities of types I and II. The principal industries are mining and textile production. Fifty-four of these are included here.

IV. Montgomery type communities have urban populations of more than two thirds and an economy based on agriculture and related commerce. Their cities and towns vary considerably in size. Only 14 of these are in the LAGS sample.

V. Dallas type communities are agricultural, and between 33% and 66% urban. They constitute the major agricultural producers of the Gulf States, growing every staple crop in the region. There are 122 of this type in the sample.

VI. Sumter type communities are agricultural counties with less than one

third urban population. Usually they have no towns with populations over 10,000.

Subsistence farming competes with agriculture and dominates some of these 141

communities.

The LAGS localities are also divided into six types with representative

Alabama cities and towns as examples. They are characterized by population,

growth rate, and local cultural importance, designated by upper-case letters.

Because the last category, the Arab type locality, is much larger than the

other five, it is further subdivided into three parts, designated by Arabic

numerals. Finally, the third subdivision, type F-3, consisting of 400 localities,

is broken down into eight additional types.

A. Birmingham type localities are generally large urban and cultural centers,

metropolitan areas with populations exceeding 100,000. The 30 such cities in

the LAGS sample include "Old South" commercial centers and "New South" industrial

and tourist areas.

B. Gadsden type localities are rapidly expanding centers of culture with

populations over 50,000. There are 20 in this analysis.

C. Bessemer type localities are large towns and larger dormitory suburbs

within spheres of urban influence. Some of these 27 places have populations

of more than 20,000; all are tied to nearby urban areas.

D. Florence type localities constitute a mixed set of expanding, stable,

and declining cities with populations over 25,000. Most of these 27 are older

localities that serve as distributional centers for surrounding agricultural

areas.

E. Opelika type localities form the most diverse set in the LAGS territory,

consisting of small cities with populations over 10,000. Among the 72 places

of this type are industrial, agricultural, and transitional towns.

F. Arab type localities are also a mixed set of expanding, stable, but

usually declining towns with populations under 10,000. Of the 699 localities in the LAGS sample, 523 fall into this category. These are divided into three subsets:

1. Demopolis type localities are small cities with populations of 5,000-10,000, predominantly expanding towns. The list includes 46 of these.

2. Marion type localities, small towns with populations between 2,500 and 5,000, are also predominantly expanding but less dynamic than those of type F-1. There are 77 of these in the sample.

3. Banks type localities are the 400 rural places with populations under 2,500. The large number of these also calls for further subdivision. In the following list, they are grouped in eight subcategories:

    a. textile areas (2)

    b. fishing villages (3)

    c. mining and petrochemical places (14)

    d. tourist centers (16)

    e. lumber towns (21)

    f. embryo suburbs (25)

    g. agricultural sites (100)

    h. moribund rural places (219).

Further data concerning all of the communities and localities in which LAGS interviews were conducted can be found in chapters 2, 3, and 5 of the handbook. The information presented in this paper is intended to serve as an adjunct to that volume by displaying the data in a format easily accessible for ready reference and comparative purposes.
